ALICE SPRINGS RAIL OVERPASS

WORKS COMMENCE SOON

Funded by the Australian Government’s Infrastructure Investment Programme, a new $24.14 rail overpass will be constructed south of Alice Springs.

The new overpass will replace the current level rail crossing located approximately 12 kms south of Alice Springs on the Stuart Highway. This overpass will replace the last level crossing on the National Network Highways which will increase road safety on this major corridor for heavy vehicle traffic (particularly freight between NT and SA), tourists and residents.

Works is expected to begin on the detour late July, 2014.

Temporary detour:

- A sealed, temporary two-lane detour and level crossing will be in place to ensure smooth flow of traffic in both directions during the works
- Detour will be completed by end of August, 2014

Scope of works:

- 40m long bridge over the National Railway line
- New approaches either side of the bridge

During the works, lane closures and speed restrictions will be in place.

Traffic management will be on site and motorists are asked to adhere to traffic controls.

A further project update will be provided as works progress.
Completion date:

Expected completion is approximately June 2015.
